Acunetix latest version

Teamwork and cooperation are needed to create and maintain an effective security program. Acunetix 360 allows you to easily set up workflows to help you resolve identified vulnerabilities. You can include security, development, and management teams at any level of process customization. You can add as many users as you want with granular rights, as well as use selected tools such as email, slack, text, etc. Automate with Acunetix Acunetix has played a very important role in identifying and mitigating web application vulnerabilities. Acunetix has proven itself and is worth it. Thank you Acunetix team. M. Rodgers, U.S. Air Force With Acunetix WVS we were able to perform our tasks better, thereby improving the quality, stability and security of Joomla! We would like to thank Acunetix for supporting Joomla! giving us the opportunity to use our own tool. Thank you Acunetix team. Robin Muilwijk, Joomla! Supported operating systems Microsoft Windows 8.1 or Windows 2012 R2 and later MacOS Mojave and MacOS CatalinaUbuntu Desktop/Server 16.0.4 LTS or later Suse Linux Enterprise Server 15openSUSE Leap 15... 0 and 15.1Kali Linux versions 2019.1 and 2020.1CentOS 8 Server and WorkStation (seLinux Disabled)RedHat 8 (seLinux Disabled)We are actively testing other Linux distributions. Please let us know if you have any requests for specific distros. CPU: 64-bit processorSystem memory: at least 2 GB RAMStorage: 1 GB of free hard disk space. This does not include the storage required to save the scan results - it depends on the level of use of Acunetix.Supported BrowsersA Acunetix User Interface supplied via the web server. Supported browsers are: If you have browser-related problems, first make sure that you're using the latest version of one supported browser before you turn to support. Installing WindowsLae the latest version of Windows Acunetix from the download location in advance if you purchased the license. Double-click the Acunetix installation file to start the Setup Wizard, and then click Next when prompted. Review and accept the license agreement. Provide administrator user account credentials. They are used for access and acunetix. Configure how the Acunetix Web UI is accessed and when remote UI access is enabled. Review the installation steps, and then click Install to start the installation. Setup now copies all files and installs Acunetix services. When you're done, click Finish. Installing LinuxLae the latest Linux version of Acunetix from the download location in advance if you purchased the license. Open terminal WindowUse chmod to add executable permissions to installfileE.g. chmod +x acunetix_13.0.200205121_x64.shRun installationE.g. sudo ./acunetix_13.0.200205121_x64.shIn if there are no dependencies, see Notes and accept the license agreement. Configure host name that Use acunetix UIProvide credentials in an administrator user account. They are used to access and configure the Acunetix.Proceed installation. Notes: SeLinux on Centos 8 or RedHat 8SeLinux must be disabled when you install Acunetix on Centos 8 or RedHat 8.To disable SeLinux temporarily, open the Terminal window and run as follows:To disable SeLinux permanently:open the Terminal windowrun command sudo nano /etc/selinux/config find a line that sets the SELINUX parameter and change the line to read SELINUX = disabledave modified /etc/selinux/config filereboot machinePackage PrerequisitesNext must be installed before installing Acunetix:disabled sudo apt-get install libxdamage1 libgtk-3-0 libasound2 libnss3 libxss1 libx11-xcb1 libxcb-dri3-0 libgbm1 libdrm1On Suse Linux Enterprise Server or OpenSUSE Leap:sudo zypper installXdamage1 libgtk-3-0 libasound2 mozilla-nss libX11-xcb1-xcb1On Hat Enterprise Linux 8 or Centos 8 or Centos 8 :libX11 libX11-devel GTK3 nss libXScrnSaver alsa-lib bzip2 mesa-libgsmS Install MacOS Mojave and MacOS CatalinaLae MacOS latest version Acunetix download from location provided if you purchased a license. Double-click the installation PKG file to start the Acunetix setup wizard, and then click Continue when prompted. Review and accept the license agreement. You may be prompted to complete the installation of your MacOS password. Acunetix management user account credentials. They are used to access and configure Acunetix.Configure how the Acunetix Web UI is to access and click Continue to start the installation. Setup now copies all files and installs Acunetix services; When the installation is complete, the default browser is started to allow access to the Acunetix UI, and the Continue button becomes enabled in the installer. Click Close to exit the installer. Activation of your Acunetix installationAfter installing, Acunetix must be activated using your license key. This can be done by logging on to Acunetix using the web UI, which by default works . You'll be directed to the user profile page, where you'll need to update your contact information. Enter the license key and continue to activate the product. Web interface language: Select the language available for the Web interface from the User

profile page. Time ZoneIf you want Acunetix to provide date information in a time zone that is different from that of your operating system, you can select the time zone you want. Enable AcuMonitor Service At this stage, you can also register your installation with the AcuMonitor service. AcuMonitor is used to identify certain types of vulnerabilities, such as Blind XSS, SSRF, XXE, and other off-bar vulnerabilities that can only be detected by a mediation service. For more information about AcuMonitor, see . Note: Product activation requires an Internet connection. Enable additional scanning technologiesAdditmatic scanning tools allow you to make a more in-depth assessment when installing AcuSensor in a web application If you need to scan a .NET, JAVA, or PHP web application, you should install your web application Acunetix AcuSensor to improve vulnerability detection, get a line of source code where the vulnerabilities are located, and reduce false positive results. Installing Network Scanning (OpenVAS)Acunetix can be configured to use OpenVAS to make network scans of targets configured by Acunetix.Installing Malware ScanningAcunetix can work with AntiVirus engines to control malware on your site. The default engine that is used is the Windows Defender AntiVirus service, with ClamAV being a viable alternative. Upgrading AcunetixNew Acunetix For WindowsEt upgrade to previous major version Acunetix: Close all instances of Acunetix (and related utilities such as Login Sequence Recorder)Selectively backup the Acunetix data folder that contains the Acunetix database and other settings. These are all found in <C:\ProgramData\Acunetix>;You can run the latest Acunetix installation directly from the machine running the previous version of Acunetix. The installation detects an older version and continues to upgrade to the latest version. All your settings will be retained. Upgrading Acunetix Linux « Back to Acunetix Support Page London, UK - May 2018 - Acunetix, pioneer of automated web application security software, has announced the release of version 12. This new version supports JavaScript ES7 to better analyze sites that rely heavily on JavaScript as SPAs. This, along with the new AcuSensor Java web applications, sets Acunetix before the curve of its ability to thoroughly and accurately scan all types of websites. With v12 is also a brand new scanning engine, redesigned and rewritten from the ground up, making Acunetix the fastest scanning engine in the industry. Acunetix was always at the forefront when it came to accuracy and speed, but now re-engineered scanning engine and sensors that support the latest JavaScript and Java technologies, we can see websites scanned up to 2x faster without compromise accuracy. reported by Nicholas Sciberras, CTO. Support for the latest JavaScript Acunetix DeepScan and Acunetix Login Sequence Recorder has been updated to support ECMAScript Version 6 (ES6) and ECMAScript Version 7 (ES7). This allows Acunetix to better analyze JavaScript-rich sites that use the latest JavaScript features. The modularity of the new Acunetix architecture also makes it much easier now for the technology to stay ahead of the industry curve. Java Acunetix version 12 acuSensor contains new <C:\ProgramData\Acunetix>.java for web applications. It improves website coverage and detecting web vulnerabilities, reduces false positives, and provides more information about detected vulnerabilities. Although already supported by PHP and ASP .NET, the introduction of Java support for AcuSensor means that Acunetix's coverage of interactive gray box scanning web applications is now likely to be the widest in the industry. The speed and efficiency of the multi-engine combining the fastest scanning engine with the ability to scan multiple sites at once, in a multi-engine environment, allows users to scan thousands of sites in as little time as possible. Acunetix multi-engine setup is suitable for Enterprise customers, who must scan more than 10 web sites or web applications at a time. This can be achieved by installing one main installation and several scanning engines, which are managed from the central console. Pause / Continue Feature Acunetix Version 12 allows the user to stop scanning and Resume scanning later. Acunetix will continue to scan where it was left off. There is no need to save the scanning state files, etc. - information about the suspended scan is automatically stored in Acunetix. The trial version can be downloaded here about Acunetix User-friendly and competitively priced, Acunetix leads the market with automatic web security testing technology. The industry's leading crawler fully supports HTML5 and JavaScript and AJAX-heavy websites, allowing for auditing of complex, authenticated applications. Acunetix offers the only technology on the market that can automatically detect out-of-band vulnerabilities and is available both online and on-premises. Acunetix also includes integrated vulnerability management features to expand the company's ability to thoroughly manage, prioritize and control vulnerability threats - commissioned by corporate criticality. Acunetix, a company founded in 2004 to combat the alarming rise in web application attacks, Acunetix is a market leader and pioneer of automated web application security technology. Acunetix products and technologies rely globally on individual pen-testers and consultants all the way to large organizations. It is a tool of choice for many clients in the government, military, educational, telecommunications, banking, finance and e-commerce sectors, including many Fortune 500 companies, such as the Pentagon, Harper Collins, Disney, Adobe and more. Get the latest online security content in your inbox every week. Week.
